this book combines positive political theory social network research and computational modeling explaining why some people are more likely to vote than others

voting is a habit people learn the habit of voting or not based on experience in their first few elections elections that do not stimulate high turnout among young adults leave a footprint of low turnout in the age structure of the electorate as many individuals who were new at those elections fail to vote at subsequent elections elections that stimulate high turnout leave a high turnout footprint so a country's turnout history provides a baseline for current turnout that is largely set except for young adults this baseline shifts as older generations leave the electorate and as changes in political and institutional circumstances affect the turnout of new generations among the changes that have affected turnout in recent years the lowering of the voting age in most established democracies has been particularly important in creating a low turnout footprint that has grown with each election

persistent racial ethnic gaps in voter turnout produce elections that are increasingly unrepresentative of the wishes of all americans
